## Product Range

LABELVIEW 7.0 delivers enhancements for ease of use, including additional tools and printing options. LABELVIEW 7.0 replaces LABELVIEW 6.xx and is available in the same three main configurations:

**Basic:** An entry-level package for basic applications. It is available as a single user version.

**Pro:** A middle-range package that provides more features than Basic, including the ability to connect to a database. It is available in a single user version and a run time version that performs printing only, not design.

**Gold:** A high-end version of the software with maximum features that include OLE tools. Gold is available in single user, run time and network versions for 3, 5, 10, 25 and 50 users.

### **Note:**

The LABELVIEW 7 Gold product replaces the LABELVIEW Healthcare product. LABELVIEW 7 now includes HIBC bar codes, which can be activated by going to Options / Configuration / Display tab and clicking the Use HIBC Bar code check box. Then restart the software to view the HIBC bar code options.

LABELVIEW 7.0 optimizes the printing process by ensuring the use of printer resources when printing labels, minimizing the amount of data sent to the printer.

The following tables provide a summary of the features available in LABELVIEW 7. Refer to the Quick Start Guide or Help for detailed information on how to use a feature or tool.

## PC Requirements

The basic software and hardware requirements required to run the label design software are similar to those of most applications running on Microsoft

Windows:

- IBM-compatible PC, 486 or better
- Microsoft Windows 95, Windows 98, Windows Me, Windows NT 4.0, Windows 2000 or Windows XP
- 16 MB RAM with Windows 95 (32 MB recommended)

- 32 MB RAM with Windows 98 or Windows Me (64 MB recommended)
- 64 MB RAM with Windows NT 4.0, Windows 2000 or Windows XP (128 MB recommended)
- VGA monitor or better
- Hard drive with at least 40 MB free disk space
- CD ROM drive

**Note:**

TEKLYNX does not recommend using the Windows 95 Operating System. As the manufacturer's support for this OS continues to decrease, our resources for supporting this OS will be limited.

## Features Listing

### General

LABELVIEW 7 is a 32-bit version that includes network-printing capabilities, context-sensitive Help, major editing features (undo/redo, color, object alignment...) and it also includes a level of security for critical access.

FEATURES	BASIC	PRO	GOLD
Platform	32bit	32bit	32bit
Print-only version		•	•
Network version			•
Printer code converter			•
Label samples	•	•	•
On-line documentation	•	•	•
Undo	•	•	•
Hidden (unprintable) objects	•	•	•
Graphic formats import (bmp, pcx, jpg, tif, etc.)	Fixed only	•	•
Color support	•	•	•
Color graphic reduction	•	•	•
Object positioning	•	•	•
Multi-level password protection		•	•

Label specific passwords	●	●	●
Label previews	●	●	●
Multilingual support (18 languages)	●	●	●
Long file names	●	●	●
Custom bar code support	●	●	●
2D bar code support		●	●
HIBC support		●	●

## Database Support

LABELVIEW 7 supports many types of database formats and offers three different options for connecting to database files:

- Native ACSII file support
- Using ODBC technology
- Using OLE DB, DNS files...

Furthermore, LABELVIEW 7 allows you to write your own SQL statement for an ODBC data source. This ability provides database users with a common language that can link a variety of database formats.

LABELVIEW 7 also includes an internal database editing tool that allows you to create simple databases and manage them.

When printing labels, the database access is setup to be **READ-ONLY** to avoid overwriting critical data of your system.

FEATURES	BASIC	PRO	GOLD
ASCII database		●	●
Database Editor (DBF and any ODBC data source)		●	●
ODBC (Microsoft Open Database Connectivity)		●	●
OLE DB		●	●
Key field access to database records		●	●
Table view/print		●	●
DNS File support			●
Customized SQL queries			●

## Variable Data

LABELVIEW 7 can manage variable data on a label. It could be a text field, a bar code, or even a graphic. Generally the data is coming from the keyboard, a COM port, or from a database. It could also be a formula based on other fields.

Refer to [Variable types supported](#) for a list of all variable data supported.

FEATURES	BASIC	PRO	GOLD
Flexible date and time stamping	●	●	●
Variable graphic images		●	●
Shared serial files		●	●
Decimal value formatting		●	●
Linked expressions		●	●
Add an offset to date		●	●
<b>User Input Fields</b>			
Set input format	●	●	●
Minimum input length		●	●
PickList		●	●
Automatic prompt	●	●	●

## Tools

LABELVIEW 7 includes many powerful tools that leverage your label printing capabilities and allow you to:

- Generate a tracking report to view a list of all printed labels and their data
- Easily design bar code labels using the UCC/EAN 128 Assistant
- Print labels outside of the “Windows box” using the PRINTPAD™ CE bar code printing terminal
- Alter the printer code by using the Job Modifier
- Populate print jobs (data files) to be printed automatically using Command Files

<b>FEATURES</b>	<b>BASIC</b>	<b>PRO</b>	<b>GOLD</b>
Tracking Report			●
UCC/EAN 128 Assistant		●	●
DataWatch			●
CommWatch			●
Visual Basic form builder			●
PRINTPAD CE support		●	●
Label Select			●
Command Files (new features)			●
Job Modifier		●	●
LABELVIEW Symbol TrueType Font (industry specific symbols)	●	●	●

### **Programmability**

<b>Programmability</b>			
OLE Automation			●
OLE Client (insert WordArt, spreadsheets, etc.)		●	●
DDE (Dynamic Data Exchange) (*)			●

(\*): Please note that this technology is still supported in LABELVIEW 7 but it will be discontinued in subsequent releases.

## Product Details

### Variable Types Supported

Fixed	The value is entered when the label is created and never changes.
When Printed	The operator will be asked to type in the data at print time.
Linked	The information is taken from one or more other fields on the label, or mathematical calculations are performed.
dBase	The data is retrieved from a dBase III or IV compatible database.
ODBC DB	The data is retrieved from an ODBC database that must first be set up through the Windows Control Panel.
OLE DB	This feature is similar to ODBC in that it allows data from many different formats to be added to labels.
Date / Time Stamp	The current date or time is retrieved from the computer when the label is printed. Several date and time formats are available. All labels in a single batch will have the same time printed on them.
Serial File	A serial number is retrieved from a serial file at the time of printing.
CommWatch	The data is retrieved from an external device through the computer's serial port.
Accumulator File	Takes data from any field on a label format after printing and adds its value to a pre-determined file.
Pick list	The data comes from a pre-configured drop down menu allowing exact entry of data with no user errors or unauthorized entries.
Shift Code	A Shift Code allows a pre-determined value to be printed out according to the time of day the print job is sent to the printer.
Data Dictionary	Using this option calls a predefined series of When Printed fields to be used with DDE exchanges and automated printing routines.

### Bar Code Symbologies

The following tables list the symbologies that are supported by LABELVIEW 7 (in comparison to those that were supported in LABELVIEW 6.xx).

## Linear (One-Dimensional) Bar Code Symbolologies

SYMBOLGY FAMILY (IF ANY)	LINEAR SYMBOLOGIES	LV 6	LV 7
	CODABAR	✓	✓
	CODE 11		✓

- For the WPG, PICT, and EPS file formats, the software handles “Raster Only”.
- Regarding the GIF format, a license is required from Unisys for formats using LZW compression.

## Thermal Printer Drivers Supported

For information on the printer models included in LABELVIEW 7, please refer to the end of this document.

This list provides information regarding LABELVIEW 7.0 drivers. Please note, the list may vary depending on the version you have. Visit our web site at [www.teklynx.com](http://www.teklynx.com) or contact a Teklynx sales representative to verify whether a specific printer model is included.

## FAQs
